Wireless Survey and Remediation in Specialty Retailer's Problematic Stores

The client is a global specialty retailer of children's apparel and accessories with over 1,000 stores.

PROBLEM

They did not have sufficient wireless coverage in a subset of their stores.

SOLUTION

RTI performed a wireless survey with heat-mapping in the stores that were problematic. At this point, RTI determined remediation was needed for better connectivity in some of the stores.

RTI performed this remediation by adding access points as needed in the stores.

RESULTS

- Full project completed successfully within 1 month
- The client now has full wireless coverage in these previously problematic

We're pleased with the results, and will look to RTI for future projects!
